SUMMARY

M.S. in Business Intelligence & Analytics candidate with hands-on experience designing KPI frameworks, building executive-facing dashboards, and consolidating complex datasets into actionable insights using Python, R, SAS, Tableau, and Power BI. Proven ability to manage end-to-end analytics projects from data engineering and cleaning to final stakeholder delivery within fast-paced, cross-functional environments. Interested in applying analytical expertise to support data-driven decision-making within finance, investment, operations or supply chain environments.

EDUCATION

Master of Science, Business Intelligence & Analytics, Saint Joseph's University | **GPA:** 3.62/4.0 **May 2027**

Bachelor of Science, Business Administration, Saint Joseph's University, Philadelphia, PA **May 2025**

Major: Business Intelligence & Analytics and Machine Learning/Artificial Intelligence for Business Applications

TECHNICAL SKILLS

Methodologies:	Exploratory Data Analysis, KPI reporting, Predictive Modeling, Time Series Analysis, Statistical Research Methods, Data Manipulation, Strategic Analysis
Reporting & Visualization:	Tableau, Power BI, Excel (Pivot Tables, LOOKUP Functions), PowerPoint
Programming Tools:	Python, R, SQL, SAS, JMP, Alteryx
Databases:	Snowflake, MS Access

WORK EXPERIENCE

Graduate Assistant | Saint Joseph's University, Philadelphia, PA **Aug 2026 – Present**

- Taught seven sections of Excel Competency to 250 undergraduate business students, delivering in-lecture project demos connecting Excel to real-world applications; Hosted 10 hours of office hours per week, providing one-to-one academic support.

Data Analytics Lab Tutor | Saint Joseph's University, Philadelphia, PA **Aug 2024 – May 2026**

- Supported 500+ undergraduate and graduate students per semester with data-driven coursework in Tableau, Python, SQL, and Excel, covering ETL workflows, dashboard development, and KPI reporting across real-world business problems.
- Developed structured instructional frameworks for data cleaning, visualization design, and executive-ready reporting, helping students translate unstructured datasets into clear, reproducible analytical outputs.

Asset Management Intern | Messidor Investments, Gaborone, Botswana **Jun 2023 – Aug 2023**

- Contributed to internal reporting on portfolio performance and asset activity on a portfolio with $145M+ in Assets Under Management across real estate, private equity, and infrastructure holdings.
- Coordinated space planning and floor plan redesign with suppliers to improve space efficiency for a specific project; secured a new commercial tenant within one month through targeted outreach, reducing vacancy time and accelerating project timelines.

PROJECTS

Botswana Export Diversification Analysis – Predictive Modeling & Economic Analysis **August 2026**

- Built a multi-model forecasting framework in Python & SAS using 24 years of UN Comtrade data (98 product categories, 2,352 observations from years 2000 - 2023) to evaluate long-term export momentum and concentration risk, training eight predictive models (LASSO, SVM and neural networks) to quantify credible non-diamond export growth opportunities within Botswana.
- Validated forecasts against subsequently realized 2024–2025 trade data, revealing LASSO's superior real-world accuracy (2.97% error on total exports vs. SVM's 37.69%) and identifying two investable diversification clusters for Botswana.

Diamond Pricing & Provenance Analysis – Statistical Modeling & Data Collection **July 2026**

- Collected 187,579 diamond listings (94,448 natural, 93,131 lab-grown) across 26 variables in Python to test whether country of origin and production method affect price once the 4Cs are controlled for.
- Applied ANOVA, multiple and stepwise regression, PCA, and logistic regression in JMP; the final model explained 90% of price variation ($R^2 = 0.90$), revealing natural and lab-grown diamonds as two distinct markets.

New Era Insurance Profitability & Risk Analysis – P&L Analysis & Data Visualization **April 2026**

- Analyzed 500 insurance policies and $512M in total premium to identify profit and loss gaps across account segments, industries, claim size, and geography, identifying where the business was making money and losing it.
- Found that Specialty Accounts lost money across every industry while Transportation and Hospitality performed the best, with Transportation generating $31M in underwriting profit at a 62% loss ratio; designed an executive-level Tableau dashboard translating results into recommendations on where to grow, cut down, and tighten.

OTHER ACHIEVEMENTS

Leadership Roles: Resident Assistant; Orientation Leader; Delta Sigma Pi Executive Board; Dean's Leadership Program E-Board
Languages: English (Fluent); Setswana (Native); French (Intermediate); Zulu (Conversational); Spanish (Conversational)
